DETAILED ACTION

Information Disclosure Statement

1. The IDS filed 11/21/07 has been initialed and considered except the documents listed under "Other Documents" for being office actions that are not readily available to the public.

Allowable Subject Matter

2. Claims 1-64 are allowed.

The following is an examiner's statement of reasons for allowance: The allowability of the claims resides, at least in part, that the closest prior art of record **Monette et al. (US 2003/0102367 A1)** does not disclose or suggest, alone or in combination the step of:

As for independent claim 1, **storing measured data relevant to the route the workpiece followed during fabrication including the measured production data and the measured facility data taken during the fabrication of the lot in a data set of the workpiece, analyzing the data set of the workpiece; determining current conditions using the analysis; and applying a process control to the route based on the analysis**, in combination with the other elements and features of the claimed invention.

As for independent claim 11, **storing measured data relevant to each of the plurality of routes, including storing the measured production data relevant to the particular route the workpiece followed during fabrication and the measured facility data taken during fabrication of the lot in a data set of the workpiece;**

analyzing the data set of the workpiece; determining current conditions using the analysis; and applying a process control to the particular route based on the analysis, in combination with the other elements and features of the claimed invention.

As for independent claim 18, **storing measured data relevant to each of the plurality of routes, including storing the measured production data relevant to the exact route the wafer actually followed during fabrication and the measured facility data during fabrication of the lot in a data set of the wafer in a data processing device; analyzing the data set of the wafer; examining the analysis to determine current conditions; and applying a process control to the exact route based on the analysis**, in combination with the other elements and features of the claimed invention.

As for independent claim 24, **storing measured data relevant to each of the plurality of routes, including storing the measured production data relevant to the particular route the workpiece actually followed during fabrication and the measured facility data during fabrication of the lot in a data set of the workpiece in a data processing device; analyzing the data set of the workpiece; determining current conditions using the analysis; and applying a process control to the exact route based on the analysis**, in combination with the other elements and features of the claimed invention.

As for independent claim 29, **storing measured data relevant to the route the workpiece followed during fabrication including the measured production data and the measured facility data taken during the fabrication of the lot in a data set**

of the workpiece, analyzing the data set of the workpiece; determining current conditions using the analysis; comparing the current conditions to expected conditions; and responding to the comparison, wherein responding includes triggering a warning when the current conditions depart from the expected conditions, in combination with the other elements and features of the claimed invention.

As for independent claim 39, **storing measured data items relevant to the exact route the particular workpiece followed during fabrication including the measured production data for the particular workpiece and the measured facility data during fabrication of the lot in a data set of the workpiece; analyzing the data set of the particular workpiece; determining current conditions using the analysis; comparing the current conditions to expected conditions; and responding to the comparison, wherein responding includes triggering a warning when the current conditions depart from the expected conditions, in combination with the other elements and features of the claimed invention.**

As for independent claim 45, **storing measured data items relevant to the exact route the particular workpiece followed during fabrication including the measured production data for the particular workpiece and the measured facility data during fabrication of the lot in a data set of the workpiece; analyzing the data set of the particular workpiece; determining current conditions using the analysis; comparing the current conditions to expected conditions; and responding to the comparison, wherein responding includes triggering a warning**

when the current conditions depart from the expected conditions, in combination with the other elements and features of the claimed invention.

As for independent claim 51, **storing measured data items relevant to the exact route the particular workpiece followed during fabrication including the measured production data for the particular workpiece and the measured facility data during fabrication of the lot in a data set of the workpiece; performing an analysis on the data set of the particular workpiece on a data processing device; determining current conditions using the analysis; non-manually comparing the current conditions to expected conditions; and responding to the comparison, wherein responding includes triggering a warning when the current conditions depart from the expected conditions**, in combination with the other elements and features of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
